Trail Map

Equestrian Trails: 6.2 combined miles of beautiful natural wooded paradise starting at the Equine camping area. Smaller loop trail off main trail offers an additional .6 mi.

Hominy Branch: 2.5 mi. The trail takes you through a lush canopy of live oaks with an abundance of indigenous plants and animals. Trailhead: N 29°38'53.85" W 81°15'05.68"

Orange Trail and Loop: 1.5 mi. The Orange Trail begins at the "Hill" group camping area and proceeds through a stand of long leaf pines. There are two observation decks overlooking Pellicier Creek and a freshwater marsh. To enhance the distance of this particular trail, you can travel 1/2 mile on the Orange Loop. Trailhead: N 29°29'13.11" W 081°14'58.61"

Yellow Trail: .9 mi. This trail winds through a saltwater marsh and briefly skirts a hardwood swamp. Trail Head: N 29°39'24.58" W 81°14'44.07"

Purple Trail: 1.2 mi. Located northwest of the Lodge, this trail runs along the banks of the Pellicier Creek and merges with the Blue Trail before it brings you back to the main parking area. Trailhead: N 29°39'32.85" W 81°14'20.44"

Blue Trail: .7 mi. An ADA accessible trail, the blue trail begins and ends in a mature oak forest and takes you to a saltwater marsh at the banks of Styles and Pellicier Creeks. Trailhead: N 29°39'28.47" W 81°14' 21.84"

Legacy Trail: .6 mi. From the mainland, across a bridge and around the perimeter of Legacy Island where you will see amazing views of the bay and surrounding estuaries. Trailhead: N 29°39'26.25" W 081°14'03.59"

Green Trail: 1.1 mi. This walk takes you through a pristine hardwood swamp past an artesian spring fed pond, home to a bird rookery. Trailhead: N 29°39'25.47" W 081°14'03.75"

WHITE TAILED DEER

GREAT BLUE HERON

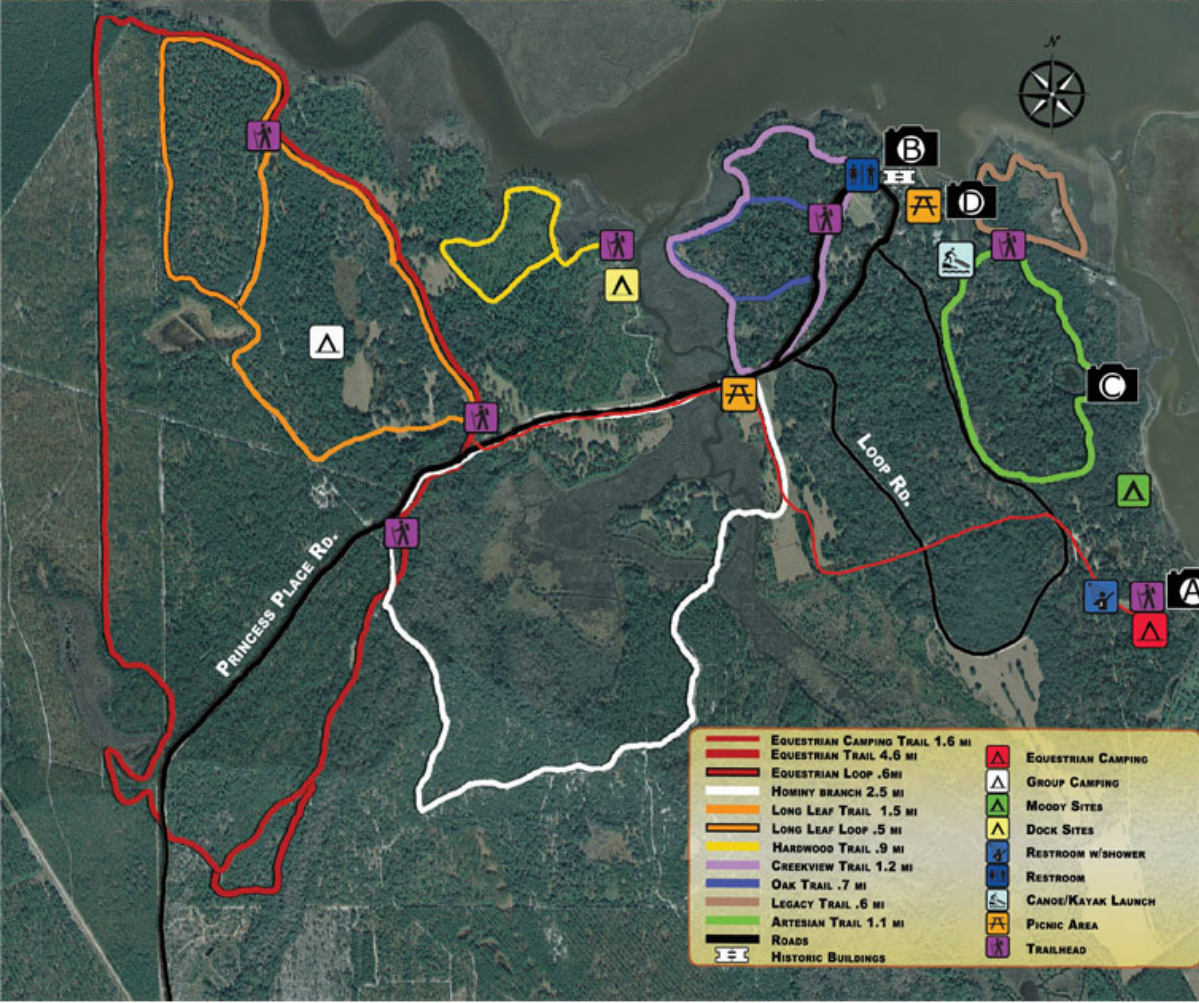

RED FOX

BOBCAT

BARRED OWL

BELTED KINGFISHER

BALD EAGLE

A/B. TIDAL SALTMARSH
Acting as protection for the coastline, salt marsh, the area between land and brackish water is populated by dense stands of salt tolerant plants (including grasses and shrubs) providing a perfect nursery for fish and shellfish. The plants that inhabit the salt marsh have extensive root systems which enable them to withstand brief storms creating a barrier buffering the impact on upland areas. Tidal creeks meander through the marshes carrying nutrients as well as pollutants from upland development. Salt marshes act as filters and can absorb, or trap, some of these pollutants, reducing the load entering estuaries. Salt marshes also prevent sediments from washing offshore, creating more land on which salt marshes can grow.

C. ARTESIAN SPRING
Located along the Green Trail is an artesian spring rising through the aquifer to create a peaceful rest stop perfect for reflection in beautiful surroundings. Artesian water provides a source of fresh water for the many animals making Princess Place their home.

D. LIVE OAK STAND
East of Pellicier Creek many live oaks grow. These oaks create a canopy for local birds and squirrels and can reach 80' in height.
